Non-neoplastic Pathology of the Gastrointestinal Tract - Roger Feakins 2019 "Prior to the development of the first fibre-optic endoscopes in the 1960’s, gastroenterology, in common with other traditional medical specialties, relied on the mechanical, long-term graft therapy and its role in the gastrointestinal tract. Histological confirmation of a disease process usually required the presence of a surgeon, was invasive, and carried inherent risks. Because of a rapid improvement in technology, we are now able to sample the entire gastrointestinal tract from the mouth and anus through to the ileal / jejunal junction."
